 X-Scale Solutions

<http://x-scalesolutions.com>

Outline

Overview of X-Scale Solutions

Overview of Products

- **MVAPICH2-DPU**: High-Performance MVAPICH2 for Accelerating Applications with NVIDIA's DPU technology
- **X-ScaleHPL-DPU**: Accelerating High-Performance Linpack Code (HPL) Benchmark with DPU Offload
- **X-ScaleAI-DPU**: Accelerating DL Training with DPU Offload

Overview of X-ScaleSolutions

- Started in 2018, bring innovative and efficient end-to-end **solutions, services, support, and training** to our customers
- Commercial support and training for the state-of-the-art communication libraries
 - **Platform-specific optimizations and tuning**
 - **Application-specific optimizations and tuning**
 - Obtaining guidelines on best practices
 - **Timely support for installation and operational issues encountered with the library**
 - **Flexible Service Level Agreements**
 - Web portal interface to submit issues and tracking their progress
 - Information on major releases and periodic information on major fixes and updates
 - Help with upgrading to the latest release
- Winner of multiple U.S. DOE SBIR grants
- Market these products for HPC and AI applications with commercial support
- A Silver ISV member of the OpenPOWER Consortium

Overview of Products

- **MVAPICH2-DPU**: High-Performance MVAPICH2 for Accelerating Applications with NVIDIA's DPU technology
- **X-ScaleHPL-DPU**: Accelerating High-Performance Linpack Code (HPL) Benchmark with DPU Offload
- **X-ScaleAI-DPU**: Accelerating DL Training with DPU Offload

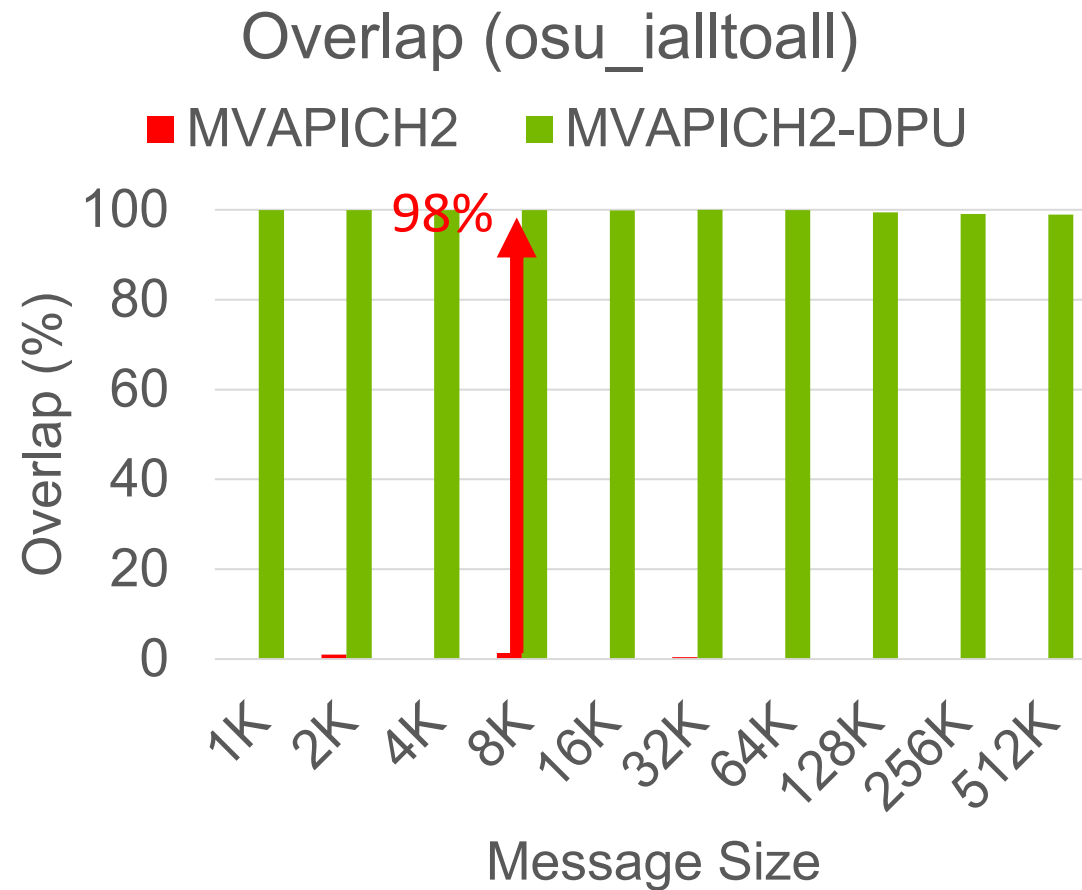

MVAPICH2-DPU Library 2023.05 Release

- Based on MVAPICH2 2.3.7
- Supports all features available with the MVAPICH2 2.3.7 release (<http://mvapich.cse.ohio-state.edu>)
- Novel GVMI-based framework to offload non-blocking collectives to DPU
- Offloads non-blocking Alltoall (MPI_Ialltoall) and non-blocking Bcast (MPI_Ibcast) to DPU

Overlap of Communication and Computation with osu_ialltoall (32 nodes)

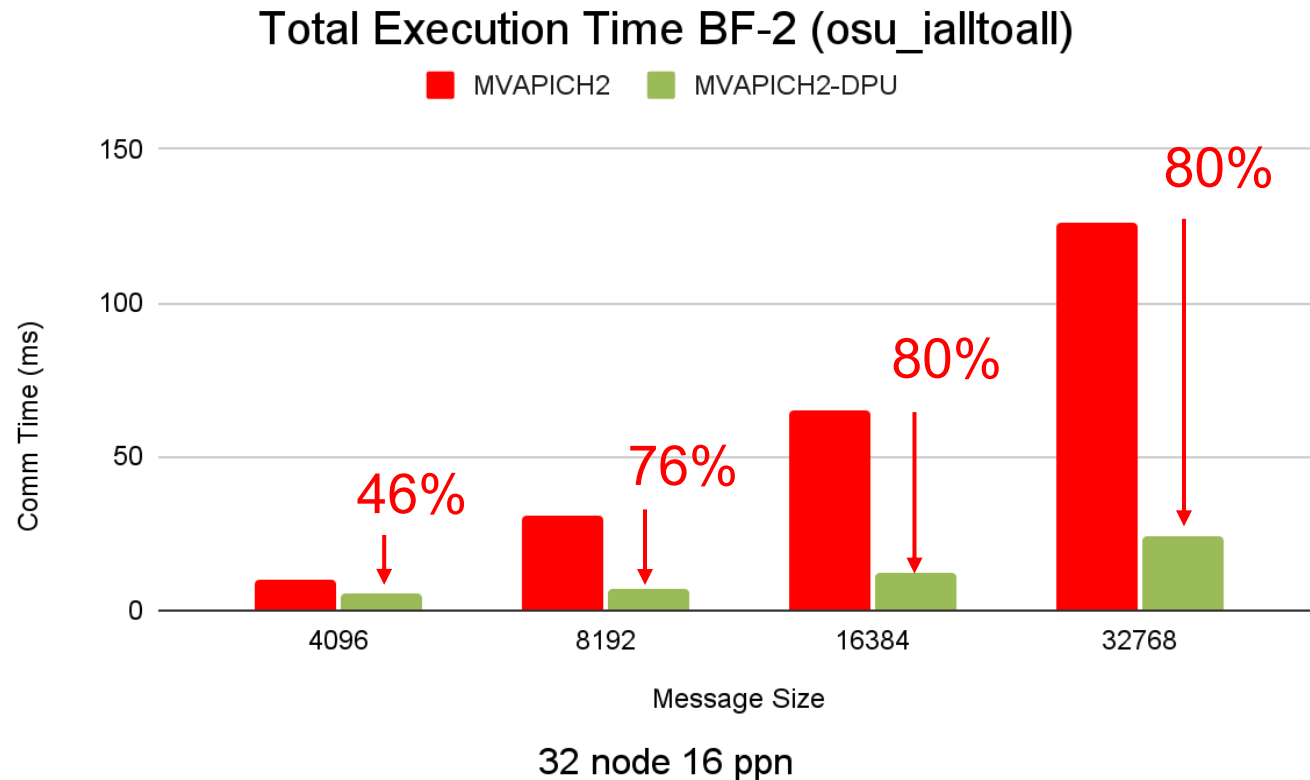

32 Nodes, 16 PPN

Delivers peak overlap

32 Nodes, 32 PPN

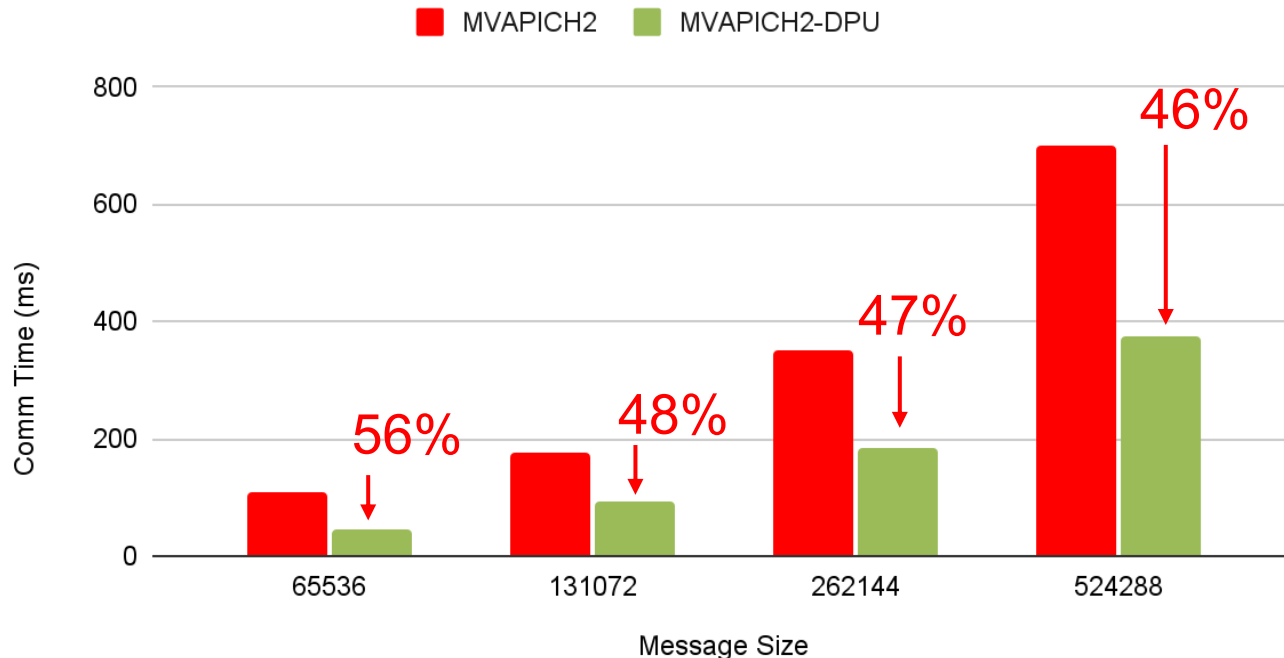

Total Execution Time with osu_ialltoall (32 nodes), BF-2 100Gbps, Intel Platform, Medium Messages

Benefits in Total execution time (Compute + Communication)

Total Execution Time with osu_ialltoall (32 nodes), BF-2 100Gbps, Intel Platform, Large Messages

Total Execution Time BF-2 (osu_ialltoall)

32 node 16 ppn

Total Execution Time BF-2 (osu_ialltoall)

32 node 32 ppn

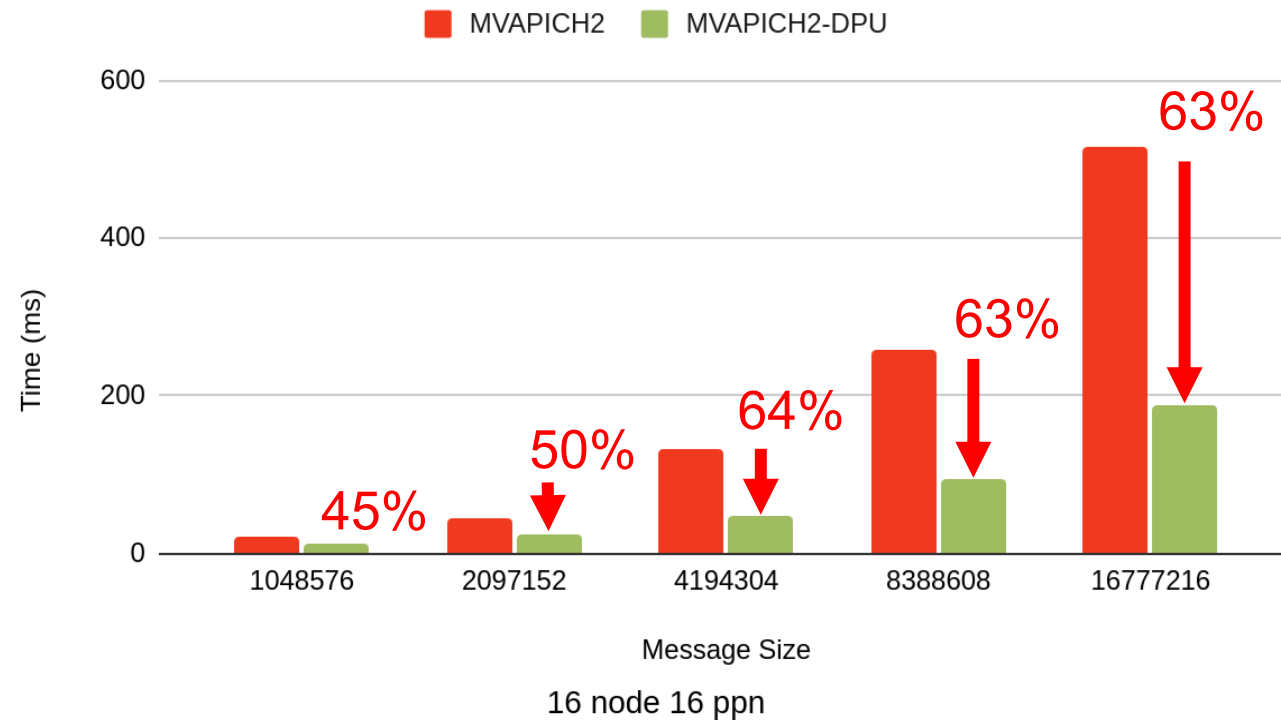

Benefits in Total execution time (Compute + Communication)

SmartNICsSummit.com

Total Execution Time with osu_ibcast (16 nodes, 16 ppn and 32 ppn)

Total Execution time BF-2 (osu_ibcast - Ibcast Ring)

Total Execution time BF-2 (osu_ibcast - Ibcast Ring)

Benefits in Total execution time (Compute + Communication)

SmartNICsSummit.com

P3DFFT Application Execution Time (32 nodes), BF-2 100Gbps, Intel Platform

32 nodes with 32 ppn
(1,024 processes)

32x32 process grid

Benefits in application-level execution time

Overview of Products

- MVAPICH2-DPU: High-Performance MVAPICH2 for Accelerating Applications with NVIDIA's DPU technology
- **X-ScaleHPL-DPU: Accelerating High-Performance Linpack Code (HPL) Benchmark with DPU Offload**
- **X-ScaleAI-DPU: Accelerating DL Training with DPU Offload**

X-ScaleHPL-DPU Package 2023.05 Release

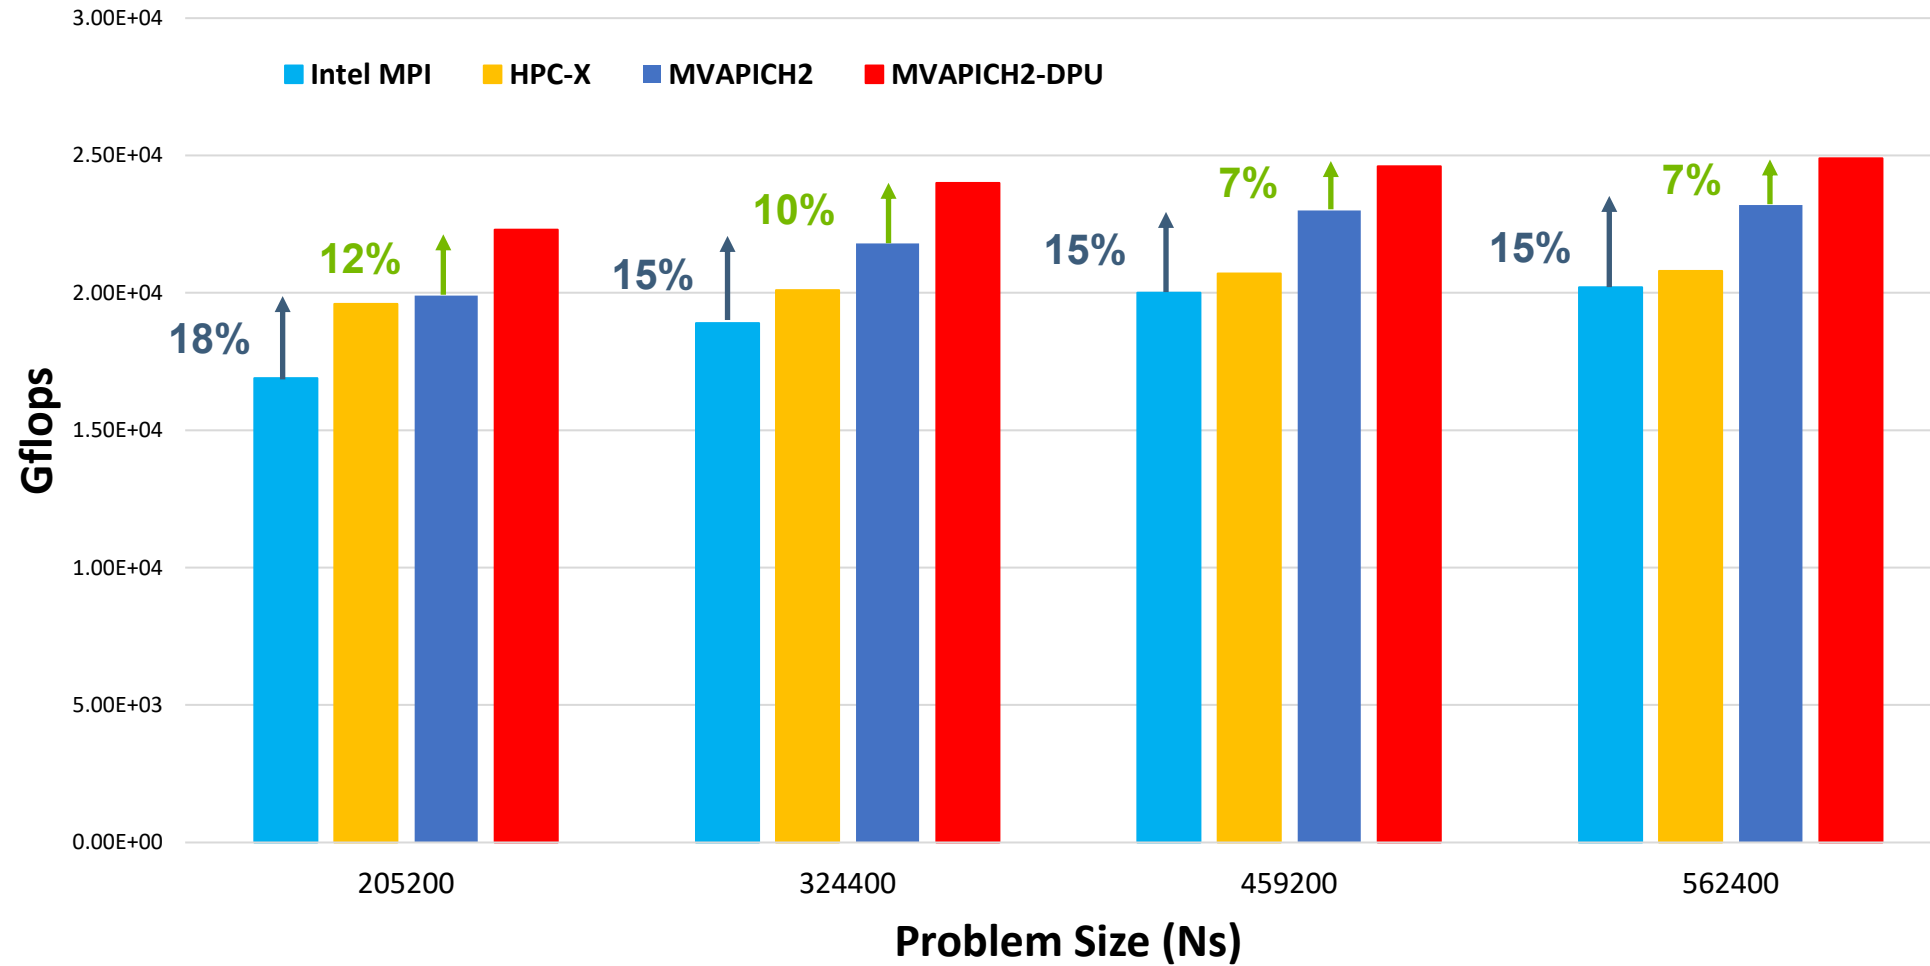

- DPU Optimized version of the High-Performance Linpack Code (HPL) v2.3
- Co-designed with MVAPICH2-DPU library 2023.05 release
- Can be run in two modes: DPU mode and Host mode
 - In DPU mode, communication offloading to DPU is enabled
 - In Host mode, no such offloading occurs

Available from X-ScaleSolutions, please send a note to contactus@x-scalesolutions.com to get a trial license.

HPL Benchmark Performance (8 EPYC nodes, 128 ppn)

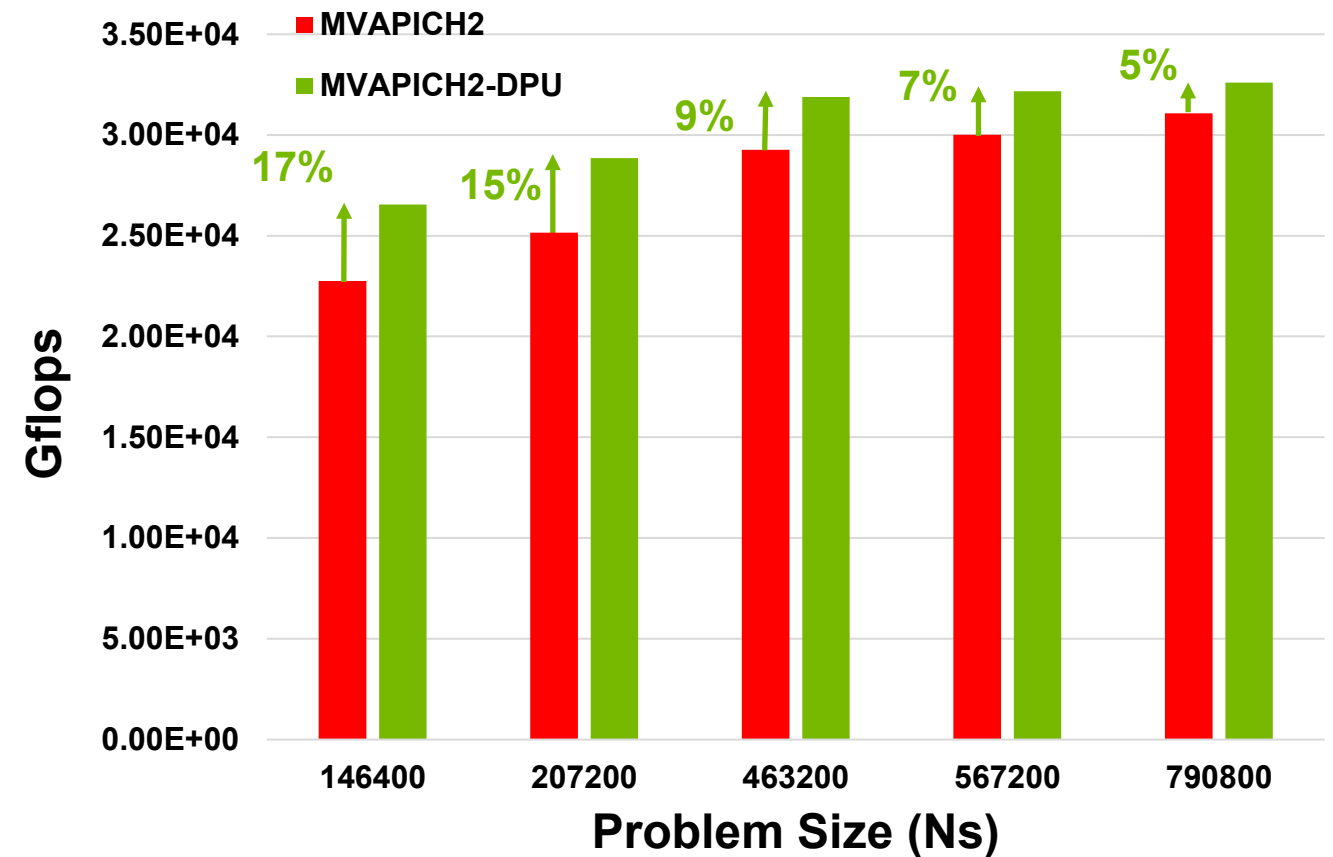

Performance benefits at application-level

HPL Benchmark Performance (16 nodes and 31 nodes, Intel Platform)

16x32 process grid

31x32 process grid

Performance benefits at application-level

Overview of X-Scale Solutions

Overview of Products

- MVAPICH2-DPU: High-Performance MVAPICH2 for Accelerating Applications with NVIDIA's DPU technology
- X-ScaleHPL-DPU: Accelerating High-Performance Linpack Code (HPL) Benchmark with DPU Offload
- **X-ScaleAI-DPU: Accelerating DL Training with DPU Offload**

X-ScaleAI-DPU Package 2023.04 Release

- Accelerating CPU-based DNN training with DPU support
 - Easy to use (deployment and execution)
 - Scalable High-Performance
- Based on MVAPICH2 2.3.7 with Horovod 0.25.0
- Supports all features available with the MVAPICH2 2.3.7 release
- Supports PyTorch framework for Deep Learning
- Main Innovations:
 - Offloading some computation steps of DL training to DPU
 - Offloading checkpointing during long running DL training to DPU

Available from X-ScaleSolutions, please send a note to contactus@x-scalesolutions.com to get a trial license.

Training of ResNet-20v1 model on CIFAR10 dataset

System Configuration

- Two Intel(R) Xeon(R) 16-core CPUs (32 total) E5-2697A V4 @ 2.60 GHz
- NVIDIA BlueField-2 SoC, HDR100 100Gb/s InfiniBand/VPI adapters
- Memory: 256GB DDR4 2400MHz RDIMMs per node
- 1TB 7.2K RPM SSD 2.5" hard drive per node
- NVIDIA ConnectX-6 HDR/HDR100 200/100Gb/s InfiniBand/VPI adapters with Socket Direct

Performance improvement using X-ScaleAI-DPU over CPU-only training on the ResNet-20v1 model on the CIFAR10 dataset

Training of the ShuffleNet model on TinyImageNet Dataset

System Configuration

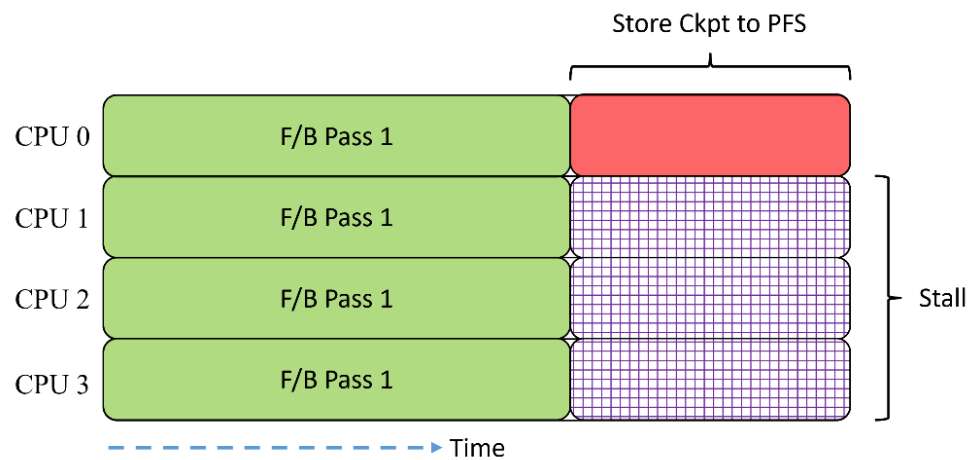

- Same as the last slide

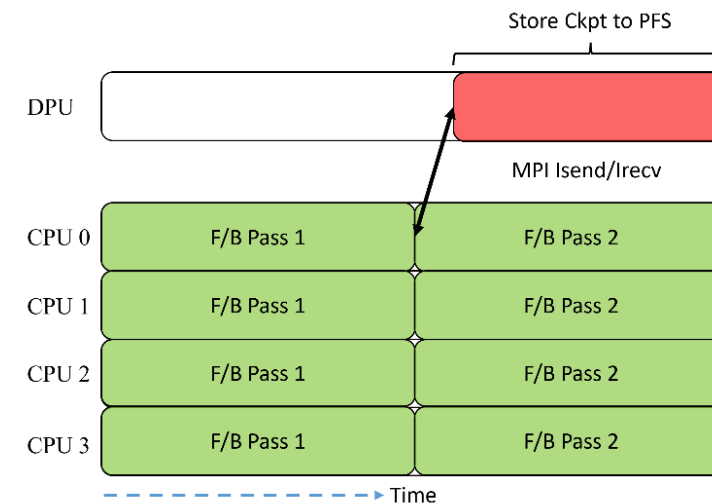

Performance improvement using X-ScaleAI-DPU over CPU-only training on the ShuffleNet model on the TinyImageNet dataset

X-ScaleAI-DPU Checkpointing

- All DNN training runs must save snapshots of in-progress snapshots of the model parameters called a *checkpoint*
 - Unstable HPC/Cloud clusters require frequent checkpointing
 - The checkpoint cost scales with the number of model parameters
- Typically, the root rank saves the checkpoint while all other ranks stall (Called a *root ckpt*)
- By offloading checkpointing to the DPU, we can overlap checkpoint I/O with compute

Default Root Checkpointing

Checkpointing with DPU offload

X-ScaleAI-DPU Checkpointing

- We measure the time per epoch with ResNet152 on the TinyImageNet dataset
 - *Root* and *Offloaded* checkpoints refer to the default and DPU checkpointing schemes, respectively
 - TinyImageNet is a subset of ImageNet containing 100k images downsized to 64x64 pixels
 - We use *4x* and *10x* to refer to checkpointing 4 and 10 times within an epoch, respectively
 - We expect users to checkpoint less frequently (4x) on stable HPC/Cloud systems, and more frequently (10x) on unstable HPC/Cloud systems
- DPU-Offloaded checkpointing outperforms root checkpointing at all node scales
- Up to **52%** reduction in epoch time for ResNet152 on an unstable system where frequent checkpointing is required

Conclusions

- Provided an overview of the products and services
- Innovative value-added products provide high-performance and scalable solutions for HPC and AI applications while exploiting modern CPU, GPU, and DPU technologies
- Happy to work with interested end customers and/or third-party integrators
