

SmartNICs Summit 2023 Keynote Schedule Is Now Available

SAN DIEGO, CA — April 17, 2023 — The second annual SmartNICs Summit, to occur on June 13-15 at the San Jose Doubletree Hotel, has now set its initial keynote schedule. Emphasis will be on emerging high-speed applications in enterprise and cloud networking. Presenting companies will be:

- Intel
- AMD
- NVIDIA
- VMware

There will also be short presentations by Ethernet Alliance, Advanced Photonics Coalition (formerly Consortium for On-Board Optics), Storage Networking Industry Association, Open Programmable Infrastructure (OPI), Open Compute Project, and prominent startup incubator Silicon Catalyst.

Topics will include network and application acceleration, open networking, system and software development for SmartNICs, and telecom, AI, and security applications. The organizations will describe their active committees, projects, and standards efforts. Attendees will learn how SmartNICs can make networks and applications run faster and be more scalable, more modular, and more flexible.

“Summit keynotes will reveal how industry leaders plan to make devices easier to program and manage,” said General Chair Chuck Sobey. “They will highlight new applications in 100G+ Ethernet, 5G networks, cybersecurity, and compute-hungry AI systems such as ChatGPT.”

The Summit will cover the latest architectures, development platforms and methods, and applications. Expert panels will discuss best choices, as well as likely breakthroughs and long-term trends. Pre-conference seminars will introduce SmartNICs and the Open Programmable Infrastructure (OPI). Other features include an expert table session (with beer and pizza) and an annual update of technologies and markets.
